

CARDPRESSO
more than an application

MAKING ID CARD PRINTING EFFICIENT!

ENROLLMENT ORIENTED cardPresso's XM edition is full of time saving features specifically tailored to meet the needs of medium sized companies and schools that regularly print photo ID cards.

PERSONALISED FUNCTIONALITIES THROUGH SCRIPT

At cardPresso, we understand that the distinct demands of each industry translate into distinct software needs. XM edition gives you the ability to customise the card printing workflow through script.

Let's imagine you need to customise different levels of permission - like which services a client is entitled to or the circumstances of when a particular student is allowed to leave school premises. Script allows you to assign colour and text codes for specific areas of the ID card layout which correspond to permission information stored in your database. The software automatically interfaces with the database to print the appropriate permission color and code on each ID card. This allows your employees to quickly and accurately determine permission simply by glancing at the appropriate area of the card - providing better service and better security.

MS ACCESS + SQL LITE DB CONNECTION

XM edition also saves you time by interfacing directly with your MS Access or SQLite database to streamline the card production process.

AUTOMATIC FACE CROP

Having up-to-date photos on ID cards is essential, but can make card production time consuming and reduce the efficiency of your enrollment process.

XM edition features an automatic face cropping tool designed to eliminate photo editing headaches and save you time in the card production process. Whether you are taking photos on the spot or using uploaded images, cardPresso quickly and efficiently crops the photo according to the definitions of your layout format, keeping your original photos intact while saving you time and eliminating errors in the card production process.

2D BARCODES

XM edition allows you to incorporate more than 10 different types of 2D barcodes, which encode more information than traditional 1D barcodes.

DO YOU NEED ADDITIONAL FEATURES?
