XL

XXL

SIMPLE DB USAGE cardPresso's XS edition is specifically tailored to meet the needs of small businesses with key features that save you time and make printing ID cards a snap!

EXCEL, CSV AND TXT CONNECTION

XS edition interfaces with the external database you've already developed, allowing you to access database information from within the printing software and use it to quickly and securely produce individualised ID cards without manually duplicating data.

Linking Excel files to your design allows you to drag and drop database elements directly into a design and alter them with a single click. That's a surefire way to reduce errors and save you time, money, and a few headaches along the way.

QR CODE

XS edition also gives you the option of including QR codes with customised data like employee ID or name.

All you have to do to include QR codes when printing any ID card is to link each code to a column in your database and cardPresso's software will automatically do the rest.

PASSWORD PROTECTION

You can prevent unauthorised alterations to your design template, access to your database, or ID card printing by password locking different phases of the card production process.

Let's imagine you want to allow employees to print ID cards but not alter the template design. No problem - a password lock on only the design phase allows card printing without any undesired creative license. Or imagine you want to restrict who can print ID cards.

PRODUCTION MODE

Production mode view gives you a streamlined interface once you've defined the design, making day to day card production easy.

You can add or manage data and print tags with just one click!

DO YOU NEED ADDITIONAL FEATURES?

	XXS	XS	XM	XL	XXL
DB CONNECTION	Internal Database Unlimited # of Records	Excel, .CSV, .txt	Database import & Live connection MS Access & SQLite Open DB Connectivity (ODBC)		
CARD ISSUANCE	Pictures + Signature	Production View	Automatic Face Crop	Multi-Layouts, Fingerprint
